Myocardial Infarction

Call Ambulance

↓

Check: **BP, RR, HR, O2**
Do: **ECG** (normal ECG does not exclude ACS)

↓

Give

- **O2 100% (**if saturation < 94%)
- **Sublingual GTN 300-400 Mcg** (can be given 3 times, 5 min apart)

Avoid if:	
• Systolic BP	< 90 mmHg
• HR	> 110 or < 60 b/m
• Inferior MI	(ST elevation in leads II, III, aVF OR reciprocal ST depression in leads I, aVL, V5, V6)
• On phosphodiesterase (PDE) inhibitors	

- **ASPIRIN 300 mg oral or chewable** (if no Contraindications)
- **IV/IM MORPHINE 5-10 mg stat** (then 1-2 mg/min up to 15 mg until adequate response) (Given if unacceptable, persistent discomfort or anxiety related to MI)
- **If respiratory depression → NALAXONE 0.4-2 mg** Repeat every 2-3 mins (maximum 10 mg)
- **METOCLOPRAMIDE IM/IV 10mg**
- **If bradycardia → ATROPINE IV 1mg** repeat if necessary to max 3mg, (if patient on aspirin do not give atropine)
