

Infant Choking

1. Recognize a severe airway block when an infant:

- Cannot breathe or make a sound
- Has a cough that has no sound

2. Remove the object (support the infant's head):

- Give up to 5 back slaps: hold the infant facedown and give slaps with the heel of your hand between the shoulder blades.
- If the object does not come out, turn the infant onto their back.
- Give up to 5 chest thrusts: use 2 fingers to push on the center of their chest.
- Repeat giving up to 5 back slaps and up to 5 chest thrusts until the infant can breathe, cough, or cry or until they become unresponsive.

3. If the infant becomes unresponsive:

- Shout for help.
- Use a cell phone put it on speaker mode while you begin CPR.
- Give sets of 30 compressions and 2 breaths, checking the mouth for objects after each set of compressions (remove object if seen).
- If you are alone and do not have a cell phone, after 5 sets of 30 compressions and 2 breaths, take the infant with you to phone and call 112 and get an AED. Use the AED as soon as it is available. Continue CPR, checking the mouth for objects after each set of compressions.
- Continue CPR and looking in the mouth after each set of compressions until
 - The infant moves, cries, speaks, blinks, or otherwise reacts.
 - Someone with more advanced training arrives and takes over.
