

Child Choking

1. Recognize a severe airway block when a child:

- Makes the choking sign
- Cannot breathe, cough, speak, or make sounds
- Has a cough that has no sound
- Ask, "Are you choking?" If they nod yes, tell them you are going to help.

2. Give thrusts slightly above the navel until:

- Object is forced out or
- Child can breathe or make sounds or
- Child becomes unresponsive

3. If the child becomes unresponsive:

- Shout for help.
- Use a cell phone to call 112 put it on speaker mode so you can talk to the dispatcher while you begin CPR.
- Give sets of 30 compressions and 2 breaths, checking the mouth for objects after each set of compressions (remove object if seen).
- If you are alone and do not have a cell phone, give 5 sets of 30 compressions and 2 breaths. Then, go phone and call 112 and get an AED. Use the AED as soon as it is available. Continue CPR, checking the mouth for objects after each set of compressions.
- Continue CPR and looking in the mouth after each set of compressions until
 - The child moves, cries, speaks, blinks, or otherwise reacts
 - Someone with more advanced training arrives and takes over
